Allowance of Application # 09/773,623

1. The following communication is in response to applicant's RCE and Amendment received 26-May-2005.

Examiner's Amendment

2. An Examiner's Amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 C.F.R.

1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the Issue Fee. Authorization for this Examiner's Amendment was given by Alexander Yampolsky (Reg. No. 36,324) on 27-June-2005.

2.1 In the Claims:

claim 6 line 1 Change "A back annotation method" to --A computer-implemented back annotation method--.

Reasons for Allowance

3. The following is an Examiner's Statement of Reasons for the indication of allowable subject matter. The instant application is directed to a non-obvious improvement over the invention described in U.S. Patent No. 5,828,580 to Ho, the improvement comprising a back annotation apparatus and method for performing a pre-layout simulation to detect active nodes, the potential of which changes when a predetermined signal is applied to a logic circuit during the pre-layout simulation, and both extracting parasitic elements and performing a post-layout

simulation using the netlist generated based on results of the pre-layout simulation. This patentable distinction is included in each of the independent claims, nos. 1 and 6. The art of record, either individually or in combination, fails to teach, suggest, or render obvious the useful, concrete and tangible <back annotation method for performing a pre-layout simulation to detect active nodes> having the corresponding structure which is disclosed in the specification and equivalents thereof at least at page 5, line 22 through page 11, line 16, and Figures 1-12D. In view of the foregoing, the claims of the present application are found to be patentable over the prior art.
